INSTRUCTIONS

General: Send an original copy of the application and exhibits, at least 2,500 viable seeds, and \$500 fee (\$250 filing fee and \$250 examination fee) to U.S. Department of Agriculture, Agricultural Marketing Service, Livestock, Meat, Grain and Seed Division, Plant Variety Protection Office, National Agricultural Library Building, Beltsville, Maryland 20705. (See section 180.175 of the Regulations and Rules of Practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

Item

- 9 Give the date the applicant determined that he had a new variety based on (1) the definition in section 41(a) of the Act and (2) the date a decision was made to increase the seed.
- 14a Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method; (2) the details of subsequent stages of selection and multiplication; (3) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4) evidence of uniformity and stability.
- 14b Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties: (1) identify these varieties and state all differences objectively; (2) attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.
- 14c Fill in the Exhibit C, Objective Description form, for all characteristics for which you have adequate data.
- 14d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 15 If "Yes" is specified (*seed of this variety be sold by variety name only as a class of certified seed*) the applicant may **NOT** reverse his affirmative decision after the variety has either been sold and so labeled, his decision published, or the certificate has been issued. However, if the applicant specified "No," he may change his choice. (See section 180.16 of the Regulations and Rules of Practice.)
- 16 See section 42 of the Plant Variety Protection Act and section 180.7 of the Regulations and Rules of Practice.

EXHIBIT A

ORIGIN AND BREEDING HISTORY OF CLEMFINE TALL FESCUE

'Clemfine' Tall Fescue, experimentally designated L-FA-SYN I, was developed from clones selected for persistence in the sand hills of North and South Carolina in 1970 by Dr. Fred Ledebouer. Three open pollinated progenies were selected for best turf performance under South Carolina conditions. The three parental clones of Clemfine were collected from a roadside in Wilmington, North Carolina, a home lawn in Sumter, South Carolina, and an overgrazed pasture near Greenwood, South Carolina.

Equal numbers of vegetative tillers from each of the progenies were propagated in 1976 and an isolated breeder nursery of randomized plants was established in Martinsville, New Jersey. Plants were rogued to uniformity prior to anthesis. The remaining material was allowed to interpollinate to produce SYN-1 breeder seed in 1977. A two acre field was established in the spring of 1979 which produced its first crop of foundation seed in 1980. Certified seed was produced in Western Oregon in 1982.

No off-type plants or variants have been observed in the reproduction and multiplication of Clemfine. Clemfine is a stable and uniform variety. Breeder seed harvested in 1977 and 1978 and foundation seed harvested in 1980 and 1981 have produced turf and seed fields of equal quality and acceptable uniformity.

EXHIBIT BSUMMARY STATEMENT OF NOVELTY OF CLEMFINE TALL FESCUE

'Clemfine' can be distinguished from all other tall fescue cultivars by the combination of spaced-plant and turf characteristics described in Tables 1 to 15.

Clemfine most closely resembles Kentucky 31. They differ in the following characteristics:

1. Clemfine produces significantly more panicles compared to Kentucky 31 (Table 1).
2. Clemfine provides a shorter leaf length than Kentucky 31 when maintained in full sun and shade (Table 2).
3. Clemfine displays a lower canopy height than Kentucky 31 when maintained in full sun and shade (Table 2).
4. Clemfine provides a slower rate of vertical growth than Kentucky 31 when maintained in full sun and shade (Table 2).

¹Plants were regularly clipped to a height of 2 inches with the last cutting 3 weeks prior to measurement.

²Approximately 85% light reduction.

³Length of 1st fully expanded leaf, average of 10 leaves for each of 3 replicates.

⁴The distance between the soil surface and the approximate average height of the extended leaf canopy, average of 3 replicates.

⁵Nail polish was used to mark a reference point on the youngest emerging leaf. After 7 days, growth was recorded as the distance between the collar and the mark, average of 10 leaves for each of 3 replicates.

The Company hereby further acknowledges and affirms that the rights and remedies of the Lender with respect to the security interest in and lien upon the Company's rights in the Agricultural Intellectual Property Collateral made and granted hereby are more fully set forth in the Loan Agreement, the terms and provisions of which are hereby incorporated herein by reference as if fully set forth herein.

Further, by this Security Agreement, the Company agrees to assign to Lender, upon the occurrence of an Event of Default by the Company (as defined in the Loan Agreement), all of the Company's rights in and to the Agricultural Intellectual Property Collateral; provided that this assignment is expressly contingent upon the occurrence of an Event of Default.

This Security Agreement will become effective June 28, 1996 at the Effective Time of the Merger of Budd Acquisition, Inc., a New Jersey corporation, with and into Lofts Seed Inc., a New Jersey corporation, as provided in a Certificate of Merger to be filed with the New Jersey Secretary of State's office.

IN WITNESS WHEREOF, the Company has caused this Security Agreement to be duly executed by its authorized officer of agent as of June 28, 1996.
